

Release Notes «20 July 2023»

With the release on the 20th of July 2023, enhancements and improvements were implemented in the following subject areas.

Section	Details
Editor	<p>Automatic file analysis when moving files to the Inbox</p> <p>When a document is moved from a folder to the Inbox, document analysis is now performed automatically and the type of the document is detected. This also applies to addresses: If a file is placed in the Inbox via Mail-to-Inbox or Upload Link, the document is now also analyzed directly.</p>
DeepAdmin	<p>Enforce and self-manage two-factor authentication in an organization.</p> <p>With this new feature, 2FA can be enforced for all users in an organization. As an owner or admin, you have the option to disable 2FA for individual users in the user management. It is no longer necessary to involve the support team.</p>

The screenshot shows the 'Organization Info' page in the DeepAdmin interface. The left sidebar contains a menu with 'Organization Info' highlighted in red. The main content area shows organization details:

- Connected YAPEAL account: No connected YAPEAL account. A button 'Connect your organization' is visible with the text 'Verify your organization to connect a YAPEAL-Account'.
- Type: Limited Company
- UID: [redacted] [Edit](#)
- VAT: [redacted]
- Notary: [redacted]
- EGID: [redacted]
- Logo: No logo [Edit](#)
- Email branding: You cannot set a custom branded email logo and color because this organization is **not verified**. Verify your organization [here](#).
- Domain verification: You can not create domain verifications because this organization needs to be at least subscribed to the **Large plan**. Upgrade your plan [here](#).
- Global Two-factor authentication: If global two-factor authentication is enabled, two-factor authentication is enabled for every user in the organization who does not log in via SSO. **Disabled**. A 'Turn on' button is highlighted in red.

DeepBox

Various bug fixes, such as:

- Zooming in the preview of more file types is possible now
- Error message when assigning tags has been fixed
- Fixed deadline can be removed without problems

DeepSign

Various bug fixes, such as:

- Improved transparency and usability of error messages
- Rare cases where a document was uploaded twice has been fixed
- Various small improvements and bug fixes in the observer feature

Onboarding / Login

New organization verification with DeepID and DeepSign

The verification of the organization is now no longer performed with YAPEAL but with DeepID. This process requires the registration of authorized signatories via DeepID app. DeepID is a free identification service provided by DeepCloud AG. After identification and specification of the authorized signatories, a verification form for digital qualified signature is sent. Further information on this process is described at <https://support.deepbox.swiss/en/videos/deepsign/signieren/what-is-the-verification-of-the-profile/>.

Step 2 / 3

Complete company account

In order to use all the features of your DeepBox account, we still need some information.

1 Personal data

Please identify yourself with DeepID to start the identification process.

Scan the QR code or open the link below with your smartphone.
