Mobile view: upload documents and create folders

Until now, there was no possibility to upload documents in the mobile phone view in DeepBox. Now, new functions can be carried out with the "+" symbol in the mobile phone view.
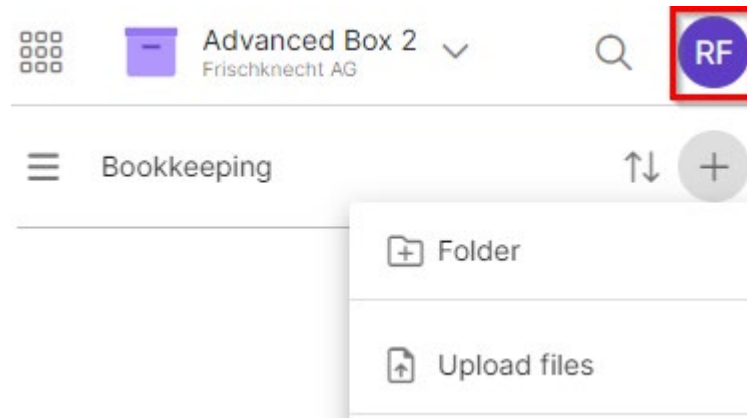

Various bug fixes and improvements in the search, such as

- Improved UI for DeepBox search
- Multiselect function for search results enabled, so that e.g. several search results can be downloaded easily
- Bug fix for search by tags
- Allowed middle mouse click to open in new tab for search results

Major Update of the iOS DeepBox App

- Access to all folders and documents in your DeepBox
- Payment of the scanned or uploaded invoice via e-banking app
- Read access to DeepSign Cockpit

Mailing: new Advanced Box added

When a new Advanced Box is added, a corresponding e-mail notification is sent. This notification now additionally shows the name of the new Advanced Box and a direct link to it.

Multi-Upload in the cockpit

In DeepSign, several documents can now be uploaded at the same time. Documents can be dragged and dropped directly into the cockpit.

Optimised performance when signing large files

The performance of signing large PDF documents has been significantly improved.

Various bug fixes and improvements, such as

- Improved UI behavior of the "I am **signing**" toggle, order of signers and scrollbar
- Fixed bug where in some cases duplicate signature requests could be sent with DeepID
- Fixed a bug in the "Invitations sent" dialogue where in rare cases the user had to reload the page first to navigate further
